

COVID-19 SAFETY

STAYING HEALTHY

IT'S OUR SOCIAL RESPONSIBILITY

If you're like us, the safety and health of our team members and customers is the absolute highest priority.

We believe it's our social responsibility to take every measure necessary to mitigate the communal spread of the Coronavirus. We have compiled a simple list of steps and precautions we take, so that our service calls are healthy and safe.

We share this with our service managers and technicians, so they can stay safe, themselves, while also protecting others around them.

THE HEALTHY & SAFE SERVICE CALL

- ✓ Check our technicians' temperatures before they go out to their first call each day. If any tech has a temperature over 99 degrees, we send them home and require they see a physician.
- ✓ Technicians must take their own temperature each evening. If they (or another household member) have a temperature over 99 degrees, we require them to stay home and see a physician.
- ✓ All techs wear disposable gloves & disposable shoe covers.
- ✓ We equip each service vehicle with soap and water for hand washing between service calls.
- ✓ We provide each technician with hand-sanitizer, where available.
- ✓ Technicians are required to keep 6 feet of distance between themselves and homeowners at all times. They must wipe down surfaces near their work area after each job.
